Introducing

TradoMal

Green Tea

Major efforts to reduce malaria incidence have been carried out in the last decade in the world, the diseases remain one of the leading causes of death in developing nations of the world, most especially in Africa. In 2020, there were an estimated 241 million cases of malaria worldwide, the estimated number of malaria deaths stood at 627 000 in 2020. In 2020, Africa was home to 95% of malaria cases and 96% of malaria deaths, with children under 5 years of age accounting for about 80% of all malaria deaths in the region. However, several drugs have been tested as curative in the management of the disease but Artemisinin and its derivatives (ARTs) are the recommended first-line drugs.

Within the last decade, the usefulness of ARTs and their combinatorial forms is threatened by rising cases of resistance by *P. falciparum* strains, which can be linked to reduced susceptibility of ring-stage parasites to ART exposure in patients that abuse ART. However, high mortality and morbidity associated with malaria have necessitated the development of our Nobel **Tradomal green tea**. It works by altering the non-mevalonate or 2-C-methyl-erythritol -4-phosphate (MEP) pathway hence preventing plasmodium falciparum from launching its sequential attack.

- It is **100% organic**.
- This serve as a potential alternative.

Candidates For TradoMal Green Tea

Tradomal Green Tea is a versatile and effective alternative for several groups of individuals who face challenges with traditional antimalarial treatments. Here's a breakdown of who might benefit from using **Tradomal**:

1. Frequent Malaria Treatment Takers:

Individuals regularly treating malaria, often monthly or bi-monthly, may benefit from a switch to **Tradomal Green Tea**. This frequent need for antimalarial drugs might be due to resistance developed by *Plasmodium falciparum* against the current medication. Such resistance indicates the parasite has figured out the medication's mechanism. **Tradomal** offers a new mode of treatment, serving as an excellent substitute.

2. Sensitive to Antimalarial Agents:

For those who experience adverse reactions to artemisinin, its derivatives, or other antimalarial agents, switching to **Tradomal** is advisable. Adverse medical reactions are emergencies, and any indication of such reactions necessitates discontinuation of the current treatment. **Tradomal** provides a natural and effective alternative.

3. Difficulty Swallowing Pills:

Known as "pill dysphagia," difficulty in swallowing pills is common, even when individuals have no trouble with larger solid foods. For those who struggle with this, introducing **Tradomal** can alleviate their discomfort.

4. Fear of Injections:

Many individuals, known as trypanophobic, have a fear of injections and would benefit from avoiding them. **Tradomal Green Tea** provides an excellent alternative for this group.

5. Dislike of Bitter Pills:

People who dislike the bitterness of pills, including children and adults who prefer sweeter tastes, can use **Tradomal**, which can be sweetened without compromising its effectiveness.

6. Nature Enthusiasts:

Individuals passionate about natural health solutions, especially advocates of green tea, would be ideal candidates. **Tradomal** not only fits into their lifestyle but also has prophylactic properties, helping to prevent malaria infections when consumed regularly.

In summary, **Tradomal Green Tea** is a compelling alternative for those needing an effective, pleasant, and natural solution to malaria treatment and prevention.
